Overview

ABSTRACT

Annual Household Survey 2012-2013 is a nation- wide household survey, data collection operation of which was conducted from December 2012 to July 2013. The AHS consists of multiple topics related to household information including demography, education, housing facilities, consumption and labour force. However the survey is primarily focused on the annual household consumption and current labour force statistics. The food consumption and labour force related information was collected for past 7 days of the reference period whereas for other information related to non-food was past 12 months. Therefore, the result of the survey refers to the year 2012-2013. The results of AHS are presented in this statistical report covering five sections of the survey questionnaire. Structurally, the report contains six chapters including 42 tables, 21 figures and 5 appendices. Since the design of the survey questionnaire has followed the concepts and definitions adopted in Nepal Living Standards Surveys and Nepal Labour Force Surveys especially to capture household consumption aggregates and the current labour force related information respectively, the data analysis and tabulation is also done accordingly.

Objectives

The objectives of Annual Household Survey 2012-2013 are:

- to estimate the level and structure of household consumption expenditure each year;
- to measure unemployment and underemployment on yearly basis;
- to collect information on the areas of demography, literacy, housing facilities etc; and
- to create an annual database of household sector.

The survey is intended to support the National Accounts estimates, particularly of household sector. Moreover, the survey will explore the possibility of consumption based poverty measurement also.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Household and Individual

Scope

NOTES

The AHS survey is primarily focused on two basic indicators, household consumption aggregate and current labour force. Mainly survey includes :

1. Demography : Average household size, dependency ratio, sex ratio , Dependency ratio in urban areas, female household head.
2. Housing Facilities: Average number of rooms, main source of drinking water, source of lighting , access to mobile, toilet facilities, Households with sanitation management
3. Literacy: Literacy rate of population, adult literacy, Male literacy, Female literacy
4. Consumption: Household per capita mean consumption
5. Employment: Labour force participation rate, unemployment rate etc

TOPICS

Topic	Vocabulary	URI
Labor Markets	World Bank	
Poverty	World Bank	

KEYWORDS

Consumption, Employment

Coverage

GEOGRAPHIC COVERAGE

The survey covers the whole country(National), Ecological belts(Mountain , Hill , Terai), rural and urban.

UNIVERSE

- All households in the country determined on the basis of the usual place of their residence (de jure households). The households of diplomatic missions, the institutional households (like people living in schools hostels, prisons, army camps and hospitals) were excluded from the survey.

- All persons aged 5 years and above household members.

Sampling

Sampling Procedure

The sample frame from the National Population and Housing Census 2011 is being used for sampling of AHS 2012-2013. The Annual Household Survey 2012-2013 is the multi-stage random sampling design with equal PSUs or households distributed between urban and rural areas considering the heterogeneous labour force activities to provide a detailed picture of employment situation in the urban areas. So the prescribed 200 PSUs are divided equally in two parts, i.e., 100 PSUs each for urban and rural. The design has applied the concept of master sample frame. The sample size for the survey has been estimated at 3000 households in 200 Primary Sampling Units (PSUs). These 200 PSU have been equally distributed between two study domains, viz. Urban Nepal and Rural Nepal. The PSUs were selected with Probability Proportional to Size, the measure of size being the square root of the number of households in each ward. Fifteen households were selected for the interview from each of the selected PSU using Systematic Sampling. The technical note of the sampling procedure is given at Appendix I of report AHS 2012-2013 .

Response Rate

The survey enumerated 1485 (99%) sample households from 99 PSUs out of 100 PSUs of rural area. As regards to urban sample, all 1500 (100%) sample household from 100 PSUs are interviewed. Thus, in total 2985 (99.5%) households were enumerated in the survey.

Weighting

The sampling weights for urban and rural domain is calculated separately. In rural domain, data collection was conducted only at 99 PSUs so that actual value of the weight of this domain equals 3000.89 after adjustment. The detailed weighting calculation is given at Appendix 1, page no 56 of report AHS 2012-2013

Questionnaires

Overview

The questionnaire of AHS 2012/13 survey contains five sections. The first section contains individual or demographic information. Section two, three and four includes on household consumption including housing and housing expenses, food expenses and home production, and non-food expenses, consumption of durables and own account production respectively. The last section deals with current economic activity or labour force. The food consumption part of the questionnaire has covered broad food categories only. The household consumption part of the questionnaire has been designed in line with that of Nepal Living Standards Survey. Likewise, for the labour force part, it has followed the structure of Nepal Labour Force Survey 2008, but in current basis only. A 16-paged household questionnaire with 5 sections and 4 appendices in Nepali language was administered in the AHS. The English translation of the questionnaire has been presented at Appendix II of AHS 2012/13 report.

Data Collection Notes

Altogether 36 field workers were assigned in the main enumeration of the survey. All of them were selected from the regular staffs of the CBS and the Statistics Offices (SOs). The training of the field workers was held from October 07 to 15, 2012 covering 9 working days in total. Initially, there were 50 participants in the training programme. They were divided into two groups and two concurrent sessions were executed. Different methods of training were adopted including study of the questionnaire and reference manual, classroom session, class exercise session, mock interviews and field practices and discussions. The core team members of the project had conducted the training. To ensure the perfectness in the data entry independently, supervisors were given access to the laptop having installed data entry program for practice since the first day of the training. During this practice, they were instructed personally by a computer officer who himself had developed the data entry program. On the last day, data entry training programme was organized jointly for all participants by grouping them into 12 teams according to their probable field area, and then 12 team leaders and 24 enumerators were chosen for the field work. To collect data in the AHS, 12 teams were constructed at the field level. They were based on the appropriate Statistics Office of the CBS. Each team was responsible for a particular area of the country that contains on an average 16 PSUs comprising 3 to 10 districts. Each team consisted of one supervisor and two interviewers. Firstly, the field work was started with an assignment of one PSU for each team. After the completion of the first PSU, a 3-day review meeting was conducted. Besides the day to day field supervision by the team leader, there was a provision of supervision from the CBS (central level) as well as from Statistics Offices. For this purpose a 5-days workshop cum training programme was executed for Statistics Office heads. Central level supervisory visits by the core team members of the Household Survey Section carried out immediately after the start of the field work.

Questionnaires

The questionnaire of AHS 2012/13 survey contains five sections. The first section contains individual or demographic information. Section two, three and four includes on household consumption including housing and housing expenses, food expenses and home production, and non-food expenses, consumption of durables and own account production respectively. The last section deals with current economic activity or labour force. The food consumption part of the questionnaire has covered broad food categories only. The household consumption part of the questionnaire has been designed in line with that of Nepal Living Standards Survey. Likewise, for the labour force part, it has followed the structure of Nepal Labour Force Survey 2008, but in current basis only. A 16-paged household questionnaire with 5 sections and 4 appendices in Nepali language was administered in the AHS. The English translation of the questionnaire has been presented at Appendix II of AHS 2012/13 report.

Supervision

In the AHS 2012/13, total 12 teams were constructed at the field level. Each team consisted of one supervisor and two interviewers. Among them, supervisor was responsible for coordinating, supervising and monitoring the field work as a team leader. In addition, he was in charge of completing the community questionnaire, selecting the sampled household, checking and correcting the filled-in questionnaires and doing data entry activities. Besides the day to day field supervision by the team leader, there was a provision of supervision from the CBS (central level) as well as from Statistics Offices. Central level supervisory visits by the core team members of the Household Survey Section carried out immediately after the start of the field work. At times, central observations were done by the Director General and Deputy Director General of the Central Bureau of Statistics.

Data Processing

Data Editing

Data entry and data verification of Annual Household Survey 2012-2013 was conducted at field. For this task, a simple and clear data entry programme was developed in CPro software, and each team was given a personal computer having the entry program so that every team could be able to enter the interviewed household data in the respective field area. In other words, data entry and data verification work was done in the field residing in the corresponding PSU. Therefore both manual and batch editing was carried out and CPro programme was used for consistency checking.

Other Processing

Data entry and data verification work was done in the field residing in the corresponding PSU using laptop. Entered data was collected on monthly basis and filled-in-questionnaires were gathered from all data collection teams at the CBS. Data processing and analysis was done in the CBS using STATA software package.

Data Appraisal

No content available

File Description

Variable List

durables

Content	The Data set includes Information on eighteen durable items used by household. They are collected under durables part (Section 4.2) of the questionnaire. Questionnaire asks, for the list of durable items, the number of such items owned, and number of year passed from date of purchase, and their estimate of the current value. Furniture and livestock were dropped from the list to calculate nominal annual consumption expenditure to be in line with NLSS-III; sixteen items in total therefore are used as durables for consumption calculation.

V176	q3e	Q3E Value of in-kind	contin	numeric	

hhld_consumption

Content	In this data set, there are eighteen items of household consumption, including alcohol and tobacco, under section 3 of the questionnaire, titled "Food Expenses and Home Production" are included. Nominal values of these items consumed in the last seven days were collected by components - home production, purchase and received in-kind. Nominal consumption value was calculated for each item by adding these three components. It is important to note that the question specifically asks for the value of food items consumed in the past 7 days and not the value of items purchased or produced. The amount of the sixteen food items is aggregated to get weekly household consumption of food items. This is then converted to annual food consumption.

nonfood

Content	This Section of data set includes non food consumption expenditure of household. Forty-one consumption items of non-food nature and services were collected under section 4 of the questionnaire. Among them, thirty-one items are used for consumption calculation under non-food category excluding firewood, medical expenses, education, jewelry and tax and insurance.
